REINSPECTION SUMMARY

On October 27, 2023, PBS Engineering and Environmental Inc. (PBS) completed the AHERA three-year reinspection at McMinnville High School in McMinnville, Oregon. The reinspection was completed in accordance with the requirements of 40 CFR, Part 763, Asbestos-Containing Materials in Schools; Final Rule and Notice. AHERA-accredited inspector, Taylor Cook, performed the reinspection.

During the summer of 2017 asbestos-containing materials were removed in conjunction with other facility improvements. Materials that were abated have been removed from the inventory of asbestos containing materials.

Asbestos-containing vinyl floor tile and associated mastic was removed from the main corridors and A through D wing classrooms. Asbestos-containing vinyl floor tile may remain in classrooms not affected by the facility improvements.

The cement asbestos board (CAB) fume hood remains in science classroom D122. The CAB is used in the chemical fume hood as a resilient barrier board. It was observed in good condition.

All known or suspect asbestos-containing materials should continue to be maintained under the school district's AHERA Asbestos Management Plan.

Accreditation #: IN-22-0497C

Known or suspected asbestos-containing building materials are listed below in order of hazard priority. The priorities are established by the Accredited Inspector(s) and Accredited Management Planner(s), and are based on the assessments. A material may be listed more than once if its location varies and if the assessment criteria also dramatically changes.

1. MATERIAL Cement Asbestos Board
LOCATION Science Classroom D122
CATEGORY AHERA Classification - Non-friable ACBM.
 Miscellaneous Non-friable ACBM or Assumed ACBM

2. MATERIAL Vinyl Floor Tile and Associated Mastic
LOCATION Concealed in various classrooms
CATEGORY AHERA Classification - Non-friable ACBM.
 Miscellaneous Non-friable ACBM or Assumed ACBM
